Projects

Project: Crack and Rust Detection

Technologies Used: Python, TensorFlow / keras, OpenCV, NumPy.

Objective:

Developed a project on crack and rust detection using computer vision and deep learning.

Worked with image datasets, CNN models, and OpenCV to identify defects. Focused on detecting cracks and rust in bridge and structure images.

Project: Real-Time Sign Language Detection System

Technologies Used: Python, MediaPipe, CNN, TensorFlow/Keras, OpenCV, Streamlit

Objective:

Developed a real-time sign language detection system using MediaPipe and a custom-trained CNN. The system captures hand landmarks via webcam, classifies static gestures into alphabets, and displays the corresponding output to aid communication for the hearing-impaired.

Project: Customer Churn Prediction

Technologies used: Python, NumPy, Pandas, Matplotlib, Scikit-learn

Objective:

Developed a Streamlit-based ML app to predict customer churn using Gradient Boosting. Trained the model on customer demographics and service data with preprocessing for numerical and categorical features. The app provides real-time churn predictions to support proactive customer retention.
